

STORMWATER QUARTERLY VISUAL EVALUATION FORM

Quarter: Q3 Year: 2021

Morton Salt, Inc.
Chicago, Illinois

Discharge Location 001

A quarterly visual evaluation of stormwater must be completed at each discharge location. If the visual evaluation indicates an unnatural color, odor, turbidity, floating materials, oil sheen, or other indicators of pollution, Morton must collect a sample of the discharge and complete analyses for the pollutants that have a reasonable potential to be present in stormwater discharges in significant quantities.

The visual evaluation is required to be made of a sample in the following manner:

- In a clean, clear glass, or plastic container and examined in a well-lit area;
- Collected from a discharge resulting from a storm event that is greater than 0.1 inches in magnitude and that occurs at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event; and
- The visual evaluation must be completed as soon as practical, but not exceed one hour after runoff or snowmelt begins discharging from the site.

Monitoring Results

The following water quality characteristics must be visually inspected and recorded:

Color: Light yellow

Odor: None

Clarity: Translucent

Floating solids: Yes ☐ No ☒

Settled solids: Yes ☐ No ☒

Suspended solids: Yes ☐ No ☒

Foam: Yes ☐ No ☒

Oil Sheen: Yes ☐ No ☒

Other obvious indicators of stormwater pollution: None

Additional Comments: None

Storm Event Information

Inspector(s) Name(s): Kathryn Everett Date of Collection: 9/21/2021

Signature: 

Time of Sampling: 8:30 AM

Time since the last storm event of 0.1 inches or greater: 84 hours (8/17/2021)
